

## Cylinder Head—Description

**CYLINDER HEAD****DESCRIPTION**

The cylinder head is a cast iron casting with integral brackets for the rocker shaft assembly.

The inlet and exhaust valves operate directly in, and seat on the cylinder head. A single spring is fitted on each valve, with spring caps on the inlet

valves and rotators on the exhaust valves. An oil seal is fitted to each valve guide.

The valves are operated by rocker levers and push rods from tappets located on the camshaft in the cylinder block.

Spark plugs with tapered seats are fitted.
